Full Stack Web Developer

Fullstack Web Developer with education from UT Austin and a Certificate in Full Stack Development from Southern Methodist University. Possess skills in HTML, CSS, and Javascript and strengths in problem solving, meeting deadlines, and learning new technologies. When working on projects, I strive to create a flexible product that's easy to navigate, easy to update, and easy to look at. Excited to employ skills and partner with like-minded staff to create and improve websites in innovative ways.

Technical Skills

Languages: HTML/CSS, Javascript, Java, C
Frameworks: jQuery, Bootstrap
Other: Git

Projects

Recipe Rat - live demo | Github Repo
Front end website that searches through API's to get recipe information
- Led a team of four to create a front end website that searches a database for a recipe based on user input and displays the calorie count of every ingredient, allowing for customization of the recipe.
- Tools used: HTML 5, CSS, Javascript, jQuery, Bootstrap, theMealDB API (search for recipes), and Edamam Nutritional Analysis API (search for nutritional information of ingredients)

Weather Dashboard - live demo | Github Repo
Front end website that displays the weather forecast for a user inputted city
- My Weather Dashboard features dynamically updated HTML based on user input that uses the OpenWeather API to display the weather forecast of the city searched by the user for the next six days.
- Tools used: HTML 5, CSS, Javascript, jQuery, Bootstrap, OpenWeather (retrieve forecast information)
